Challenges in design

- too many wishes, too many topics (16 courses → 1 module) :
- team formed (not organic)
- COVID, teams meetings
- resistance
- how to teach to so many students with so many backgrounds and interests
- ...

The image displays a collage of several academic documents, likely from a university course in engineering or mathematics. The documents are overlapping and contain various types of information:

- Top Left:** A document titled "Preliminary list of prerequisites" for a course on "Monitoring Sensing and data (May 27, 2020)". It lists topics like "General introduction to sensing", "Overview of various sensor types", "Scalar fields & vector fields", "Resolution in space and time", "Continuous time/space to discrete time/space", "AC/DC conversion", "Transform theory", "Filtering", "Network of sensors", and "Design of monitoring systems".
- Top Right:** A document titled "Preliminary topics numerical modelling: simulation and optimisation (May 27, 2020)". It includes a table with columns for "Topic", "Sub-Topics", and "Applications". The topics listed are "Mathematical modelling: problems and solutions", "Simulation", "Optimization", and "Applications".
- Middle Left:** A document titled "Preliminary topics Risk analysis, uncertainty quantification, probabilistic design (May 27, 2020)". It includes a table with columns for "Topics", "Detailed Topics", and "Approx. No. Lectures". The topics listed are "Fundamental probability theory", "Stochastic processes in engineering", "Risk analysis", "Intro component reliability: the R-S problem", and "System reliability".
- Middle Right:** A document titled "Preliminary list of prerequisites Core Faculty Module". It lists topics like "Calculus", "Linear Algebra", "Programming", "Basic integration", "Taylor polynomials", "ODEs/PDEs", "Eigenvalues and eigenvectors", "LU decomposition", "Determinants", "Solving systems of linear equations", "Matrix algebra", "Inner products", "Complex numbers", and "Data".
- Bottom:** A large table with multiple columns, likely a syllabus or a table of contents. The columns include "Learning objectives", "Approx. No. Lectures", "Score the Data", "Learning objectives", "Knowledge", "Skill", "Depth", "Newness", and "Probability". The rows list various topics and their associated scores and objectives.

The documents are written in a professional, academic style, using clear headings, tables, and bullet points to organize information. The overall theme is related to engineering, mathematics, and data science.

Diversity of Topics

Q1

1. Modelling Concepts
2. Propagation of Uncertainty
3. Observation theory
4. Numerical Modelling
5. Continuous Distributions
6. Risk and Reliability Intro

Q2

1. Finite Volume Method
2. Finite Element Method
3. Signal Processing
4. Time Series Analysis
5. Optimization
6. Machine Learning
7. Extreme Value Analysis
8. Risk and Reliability, Part 2

Requires programming

Diversity of Students

What is your experience with Python programming?

Typical feedback:

As an international student I have little programming experience and found it difficult to contribute to my group. Sometimes my group members taught me things, but I could tell that I was a burden on them. I want to learn to use Python, but there isn't enough time.

Weekly Schedule – Week 1

Monday	Tuesday	Wednesday	Thursday	Friday
<div>8:45</div> <div>Lecture</div> <div>10:30</div> <div>In-Class Workshops</div> <div>10:45</div> <div>In-Class Workshops</div> <div>Multiple rooms</div> <div>Video + notebook</div>	<div>Video + notebook</div> <div>In-Class Workshops</div> <div>Multiple rooms</div>	<div>Video + notebook</div> <div>In-Class Workshops</div> <div>Multiple rooms</div>		<div>Project Sessions</div> <div>Multiple rooms</div> <div>Q1: bi-weekly Q2: 1 project all quarter</div>

Materials provided via Brightspace: Jupyter notebooks, videos

Programming: 4-hour workshops in Tue or Wed sessions (~10 total).

One of our best weeks

<https://bright>

Week 1.7: Sensing and Observation Theory 27

Week 1.8: Monte Carlo & Stochastic Processes 71

Week 2.1: PDE Simulation (Finite difference method) Begins 11 November 15

Week 2.2: PDE simulation (Finite element method) Begins 18 November 19

Week 2.3: Optimization 43

Week 2.4: Signal Processing 44

Overview:

- 1.6_1a: Plenary lecture Introduction to Sensing and Observation Theory
- 1.6_1a: Take the quiz and work on Notebook 1.6_1a (in the [zip archive](#)).
- 1.6_1b: Video on Weighted Least Squares
- 1.6_1b: Take the quiz and work on Notebook 1.6_1b (in the zip archive).
- 1.6_1c: Video on Best Linear Unbiased Estimation
- 1.6_1c: Take the quiz and work on Notebook 1.6_1c (in the zip archive)

If not finished, you can continue on Wednesday.

The good and the less good – Year 1

Good

- Structured BS page
- Relevant topics
- Engineering / applications
- Projects useful and fun
- Team motivation, adaptation to feedback

Less good

- Material not suited (for BS)
- No time to standardize BS
- Way too many (sub)topics
- Programming not tailored
- Projects too stressful
- Team organization / preparation

Learning Objectives – simplified 17 → 6

After successfully completing the MUDE module a student is able to ...

1. Apply a diverse set of models and analysis techniques to solve engineering problems through a combination of mathematical formulation and implementation in computer code.
2. Process and analyze data from different sources and formats to gain insight on the underlying systems and incorporate in modeling approaches.
3. Mathematically formulate, solve and discuss estimation, risk, reliability and optimization problems for systems to support decision making.
4. Analyze and reflect on the methodology, performance, and results of modeling approaches and analysis techniques, accounting for uncertainty.
5. Implement and carry out analysis using Python programming language following specific coding standards and best practices while facilitating collaboration.
6. Communicate and interpret results of analyses with appropriate documentation, metrics and visualization techniques.

Learning Objectives

After successfully completing this course, you will be able to ...

1. Apply a diverse set of problems through a computer code.
2. Process and analyze underlying systems
3. Mathematically formulate optimization problems
4. Analyze and reflect on approaches and analysis
5. Implement and carry out specific coding standards
6. Communicate and illustrate metrics and visualization

Python, Programming in Education... ...A Reflection from Civil Engineering and Geosciences

When did you acquire your programming/computer skills?

→ Probably not in your “Intro to Programming” BSc course!!!

We expect our students to learn everything here!

Programming problems:

- Students expected to do a lot
- Teachers unsatisfied with capabilities
- Rarely taught/used after BSc course
- We don't teach students how to share
- A growing problem?

Typical Colleague?

“I don't have time to learn Python”
“Find data, do analysis. Good luck!”
“What is a .ipynb file? I can't read this!”
“Students can't code”

We are part of the problem!

Digital generation ≠ ability to use a computer

Diversity of Students

Our experience:

- Our BSc course prepares students to use numpy, matplotlib, etc
- Our BSc course does *not* teach students:
 - How to use a computer
 - To be comfortable with non-numpy data structures (e.g., dictionaries!)
 - How to communicate, collaborate or share effectively
 - The importance of reading code and writing readable code
 - Python \neq Jupyter notebook!!!!
- There are exceptions (CS minor – we hire them as TA's 😊)

These issues should be addressed at the curriculum level

We start by addressing them in MUDE

Focus of Year 2, Programming and Digital Skills

What?

- Cover topics that aren't in BSc course
- Keep topics small and simple
- Use the topics immediately
- Use platforms commonly used in industry to build digital skills (not compatible with Brightspace)

How?

- Consistent formatting of assignments
- Online textbook
- Custom website
- Assignments, files, feedback via GitLab

Weekly Schedule

Monday	Tuesday	Wednesday	Thursday	Friday
<div>8:45</div> <div>Lecture</div>				<div>Project Sessions</div> <div>Multiple rooms</div>
<div>10:30</div> <div>10:45</div>	<div>Open Question Hours</div> <div>1 room</div>	<div>In-Class Workshops</div> <div>Multiple rooms</div>		

Everything builds towards the project on Friday. Repeat for every week.

Used GitLab and text-based files (Markdown) to emphasize digital skills.

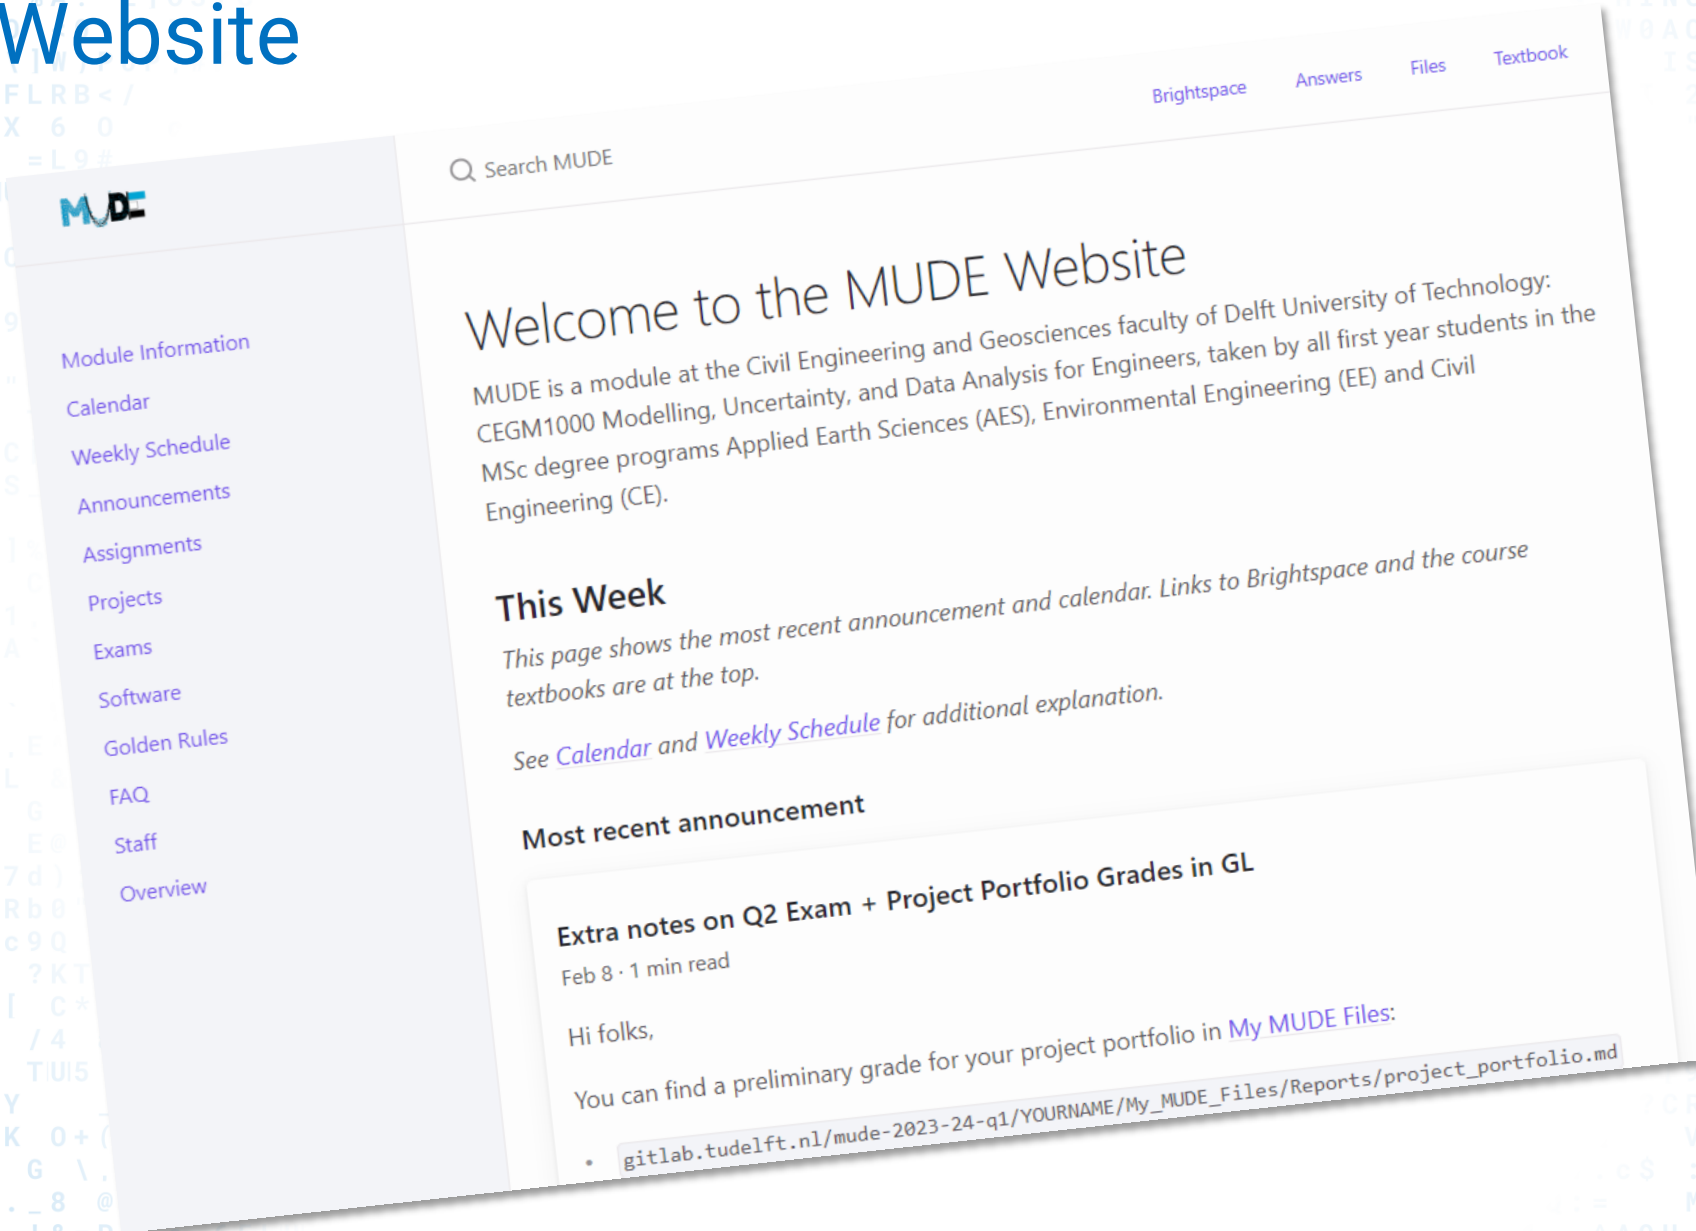

Jupyter notebook

Learn material: read and interact with online textbook.

Programming Assignments: small topics, used immediately; complete before Friday session.

Our Website

Book example p 21 slide

The interactive Python features were illustrated using demonstration videos that are not included in this PDF, but can be viewed at the following YouTube Links:

- Sympy: <https://youtu.be/X0zrlwUKja4>
- Quiz Questions: https://youtu.be/eUmdEu_Z5us
- Neural Network: <https://youtu.be/8AeYnKn4Tcg>
- Confidence Intervals: <https://youtu.be/qCYA8z-u9DE>

**As of November, 2024 the book is only accessible with a TU Delft account or special login, but this will change in the future.*

Example: Signal Proc

Programming Assignment

Overview of Ass

This assignment will add
iterating in Python, illustr
simple, but will be used d

Specifically, we will look

- iterables and iterable
- iterables range, enume
- the modulo operator %
- plot type stem

```
team = ['green', 'red', 'blue']
score = [5, 9, 7]

# for YOUR_CODE_WITH_enumerate_HERE:
#     print(f'Team {} has {} points.')

for i, j in enumerate(score):
    print(f'Team {team[i]} has {j} points.')

Team green has 5 points.
Team red has 9 points.
Team blue has 7 points.
```

You may have noticed that enumerate is a bit
define an unnecessary iteration index to acc
things easier:

Task 4:

Use zip to print out the summary of poi
statement.

```
team = ['green', 'red', 'blue']
score = [5, 9, 7]

# for YOUR_CODE_WITH_zip_HERE:
#     print(f'Team {} has {} points.')

for i, j in zip(team, score):
    print(f'Team {i} has {j} points.')

Team green has 5 points.
Team red has 9 points.
Team blue has 7 points.
```

That's really compact!

You have probably used the matplotlib plot types plot, hist and scatter frequently;
another type is stem, which is useful for indicating the magnitude of various points along
a number line. As with a scatter plot, the
values are easy to handle.

Task 6:

Run the cell below and play with the
with the stem plot type. Do you see
index?

```
value = [2, 7, 5, 1, 8]
index = [0, 2, 2, 6, 4]
plt.plot(index, value, 'o')
plt.stem(index, value);
```

```
abs_fft = np.abs(np.fft.fft(xt))
freq=np.arange(0,fs,1/T)
plt.stem(freq[:int(N/2)], abs_fft[:int(N/2)])
plt.plot(freq[:int(N/2)], abs_fft[:int(N/2)], 'o')
plt.ylabel('|Xk|')
plt.xlabel('frequency [Hz]');
```

Workshop: make a DFT.
Easy after the Programming Assignment!

Server data

In-class Sessions

Study continues through afternoon

How students perceive the book (100% response rate)

Strongly Disagree Disagree Neutral Agree Strongly Agree

A website is better than a paper book

A website is better than a PDF book

Videos in the book were useful

In-line quiz questions were useful

Python-enable pages were useful

More courses should use this type of book

Interactivity is appreciated!

How students perceive the book (100% response rate)

Students want their “own”
version to study

>>> We will work on this in
March, get in touch if
interested!

How did we make the changes?

Student Feedback

Year 1:

- Listen and talk with students during class, outside of class
- Make changes in real time
- Sometimes the changes were drastic!

>>> We quickly built trust with students;
they approached us with issues (and patience)

>>> Teachers grew accustomed to small-group decisions, in real time

Focus Groups

- Send advance survey
- Use study associations to reach students (N = 57; ~20%)
- Meet students to discuss survey results
- ... with sandwiches!!!
- Get better insights into ideas
- Can ask students about experience directly

MUDE 2.0 Student Topic Feedback

The MUDE teaching team has been working hard taking all your suggestions and feedback to improve the module for next year. We appreciate you taking the time to fill out this survey. The name and email field is set to optional in case you want

Section 1

7. Level of **difficulty** in comparison to the overall level of module.

Higher ranking indicates a higher difficulty.

1 - Topic was relatively easy 3 - Difficulty was appropriate 5 - Difficulty was too high.

Fundamentals of Probability Distributions

Mathematical Modelling

Numerical Modelling

Sensing and Observation Theory

Monte Carlo & Stochastic Processes

Finite Difference Methods

Finite Element Methods

Optimization

How did we make the changes?

Student Feedback

Year 2:

- Focus groups during the “off-season”
- Pre- and post-surveys

Pre- and Post-surveys

- Describe your comfort level, based on your programming experience at the start and end of MUDE, with regards to whether or not you would apply to a job or thesis project where the job listing specifically requested Python experience from all interested applicants.

In other words, select the answer that completes the sentence: *the comfort level I would feel in applying for a job/thesis project is, given my programming experience at the start of MUDE/now.*

[More Details](#)

■ Not at all ■ Not very ■ Neutral ■ Somewhat ■ Very

Projects (Fri)

Weekly PA's

Having a group to work with

Online textbook

How did we make the changes?

Teaching Team

- Focus inward (e.g., reducing number of large meetings)
- Reduce team size (part on purpose, part by voluntary involvement)
- Organic team development

Observations:

- Smaller team was more efficient, fun, produced higher quality education
- Also able to respond more quickly
- Students appreciated recognizable faces
- Downside: spread thin! (5 rooms, 250 students...)

New teacher experience

New teacher experience

Van: Robert Lanzafame <R.Lanzafame@tudelft.nl>

Verzonden: maandag 3 april 2023 09.25

Aan: Tom van Woudenberg <T.vanWoudenberg@tudelft.nl>

Onderwerp: RE: Jupyter Book project in CEG

For MUDF, the thing we need most are teachers who can commit to spending 2, 4 or 6 hours in the classroom with students per week in Q1 (depending on whether you'd contribute to the classroom discussion and/or project workshop classroom formats). These activities will largely cover the fundamental topics (not the super advanced ones), so the preparation for each teacher should be minimal. Especially if you are also involved a bit in the development of if between now and summer. As a lecturer myself, I think there is a big benefit to making sure that especially in Q1 we have a good number of lecturers involved 😊

New teacher experience

Van: Robert Lanzafame <R.C.Lanzafame@tudelft.nl>

Verzonden: donderdag 6 april 2023 14:17

Aan: Tom van Woudenberg <T.R.vanWoudenberg@tudelft.nl>

Onderwerp: RE: Jupyter Book project in CEG

And finally, an invitation to another event, this one for MUDE. We have a team teaching workshop on April 18th, which you are welcome to join (see the message below). On the one hand you might be a bit in the dark because you aren't as familiar with Q1 topics yet, but on the other hand, if you want to get involved next year it might be a great way to get started. If you can make it, let me know and I will forward the invitations.

TeachBooks

Teachers' Educational
Assistance for interaCtive
Hands-on Browser-based Online
Open Knowledge for Students

More about this tomorrow!

teachbooks.tudelft.nl

The good and the less good – Year 2

Good

- Well-organized module!
- Scope within each week is good
- Highly efficient at covering a certain topic in a given week

Less good

- “Bigger picture” ...
- Higher Bloom levels (engineering type thinking, etc)
- Group interaction / group work
- Redesigning Project feedback
- Finding dedicated teachers

Our Tips for IIT Madras based on Year 2

- Keep the discussions limited in scope and number of people
- A small team is efficient; key skills?
 - project mgmt, decision-making, author/implementer, programmer
- Get started now choosing platforms
- The earlier you create your first assignment and test it, the better!
- Remember to keep things simple and explain the fundamentals well
- Keep in mind diversity of incoming students (>>> Year 3...)

The good and the less good – Year 3

Good

- Format proves to be interesting/motivating for new teachers

Less good

- Lots of tools, platforms
- New teacher onboarding = 1 year (in part because of long history, but also because it is complicated!)
- We are still working on some Year 2 challenges

Summary

- MUDE is complicated, but fun!
- Expect it to take years to converge
- A small, close-knit team is effective
- Start working now
- Communicate constantly with your students, and be prepared to react
- Keep track of the feedback (also important for improving materials)
- We are optimistic this workshop will help!
- This is a lot to absorb, so we start by taking it all in as a student
